➔ Login

? Manual

You will be able to login using the ldap user set up by Anachron Operations.

The possibilities you will have in this system depend on the Authority your login contains.

ROLE\_SUPER\_ADMIN can

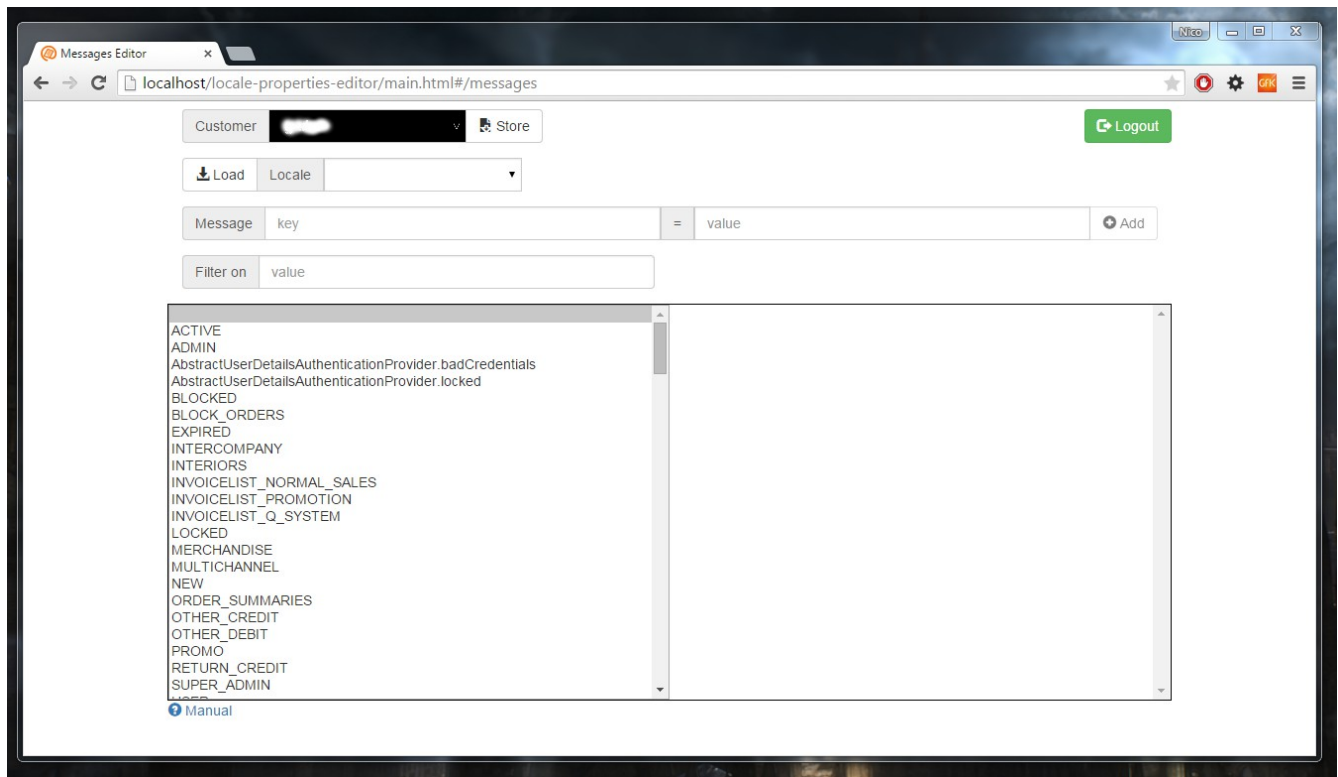

- add language files
- add message key value pairs
- remove keys from the messages.
- do all the things the users below are able to do.

ROLE\_ADMIN can

- change values per key
- store the message files (write all changes)

ROLE\_VIEWER can

- search for keys containing possible values (filter)
- view all possible keys
- select a key and view all possible translations found per locale

You have to select the customer name you want to view.

Adding/deleting translation files:

In order to add/delete a new 'Locale' you need to 'Load' the list first.  
After loading the 'Locale' list you can select the 'Locale'.

If you add an already existing language, nothing will happen.  
If you click on the 'Delete' button you will get a confirm popup.

Adding a new 'Message':

Message	A.test	=	A value	+ Add
---------	--------	---	---------	-------

When you press the Add button the system will try to add the new key/value pair. If the key is already present, nothing will happen.

Filter on value:

Filter on	new password
<div>account.password.new.enter</div>	

When you type in a value to 'Filter on' the system will look in all possible values for all possible 'Locale' files and show only the keys that contain the value to 'Filter on'.

View Key Translations:

Filter on	new pa
<div>account.password.new.enter</div>	<div><div>Remove this key</div><div><div>⌂</div><div>Please enter</div><div>_default</div><div>✓</div></div><div><div>⌂</div><div>Please enter your</div><div>ar</div><div>✓</div></div><div><div>⌂</div><div>Bitte geben Sie Ih</div><div>de</div><div>✓</div></div></div>

When you select a key the system will show all found translations in the right box.

Here you might be able to 'Remove this key'. You will have to confirm the popup choice.

You can change the value per 'Locale'.

	Please enter your new password	_default	
	Please enter <u>your</u> new password	ar	
	Bitte geben Sie Ihr neues Passwort ein.	de	

When the value changes you can reset using this button:

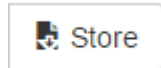

Or confirm the change by clicking on this button:

---

**When using this system you will ALWAYS have to**

**the changes made.**

**All language files that have been changed will be stored in the backup directory, and replaced with the new key/value pair 'Messages'.**
